

React Real-World Concepts Cheat Sheet

1. Infinite Scroll

Where You'll Use:

- E-commerce product listing (Amazon, Flipkart)
- Social media feeds (Twitter, Instagram)
- Data-heavy dashboards/logs

Why It's Critical:

- Prevents slow initial load
- Saves API bandwidth
- Improves UX

Mistakes Without It:

- Loading everything upfront crashes the browser or slows performance

2. Search with Live Filtering

Where You'll Use:

- Admin panels, E-commerce search, Chat apps

Why It's Critical:

- Users expect instant results
- Reduces API spam with debounce

Mistakes Without It:

- API overload, laggy search, bad UX

3. Dynamic Forms

Where You'll Use:

- Job portals (previous jobs)
- E-commerce (multiple addresses)
- Surveys/forms with custom questions

Why It's Critical:

- Forms aren't static, users need flexibility

Mistakes Without It:

- Broken forms, bad state management, user frustration

4. Multi-Step Forms

Where You'll Use:

- Signup flows, Loan applications, Surveys

Why It's Critical:

- Long forms overwhelm users, steps improve conversion

Mistakes Without It:

- Data loss when navigating back, confusing UX

5. Custom Hooks

Where You'll Use:

- API fetch (useFetchUsers), Form logic (useFormValidation), WebSocket (useChatSocket)

Why It's Critical:

React Real-World Concepts Cheat Sheet

- Cleaner, reusable code
- Avoid bloated components

Mistakes Without It:

- Repeated code, messy side-effect handling

6. Auth + Route Protection

Where You'll Use:

- SaaS apps, Admin panels, E-commerce user pages

Why It's Critical:

- Prevents unauthorized access
- Handles token expiry and redirects

Mistakes Without It:

- Huge security risks, anyone can access protected routes
